

JOB DESCRIPTION

STRUCTURAL ENGINEER

POSITION SUMMARY

We are seeking a Structural Engineer (PE or SE) with recent structural design experience to be responsible for working in a small multidisciplinary team delivering top quality projects and unparalleled service to our commercial, industrial, warehousing, and municipal building clients. In return for your talent and effort, we offer our full-time employees a competitive salary and benefits package including medical, dental, vision, life, disability, and employer-matching retirement account.

THE SUCCESSFUL CANDIDATE WILL

- Prepare design calculations, cost estimates, and plan preparation
- Provide structural design for buildings and industrial structures
- Compile, write, and edit quality technical reports, feasibility reports, letters, memos, and specifications on structural projects
- Be familiar with the recent building and engineering codes including AISC, ACI, ASCE, and IBC
- Conduct site visits and client meetings
- Oversee the work of EITs and Drafters

REQUIRED QUALIFICATIONS

- Bachelor's or Master's degree in Civil Engineering or Architecture Engineering or similar program from an accredited school
- At least 5 years' experience in building-related structural design
- A Minnesota PE or SE license or the ability to obtain a MN PE or SE license within 6 months
- Working knowledge of REVIT
- Strong communication skills to support client relationships
- Goal oriented with strong skills in problem solving, creativity, and attention to detail
- Understanding of commercial and industrial building materials, systems, and assemblies
- Ability to work with architects, builders, manufacturers, and industrial project managers

PREFERRED QUALIFICATION

- Working knowledge of 3-D camera
- An appreciation and understanding of architectural design and how architects work and think
